Last week one of my customer showed me the nameplate on the left, asking me whether it is genuine? I told him it is fake.

Why? It looks exactly the same with genuine one.

Firstly let us glance below instructions for Trina nameplate.

Just now there are so many fake brand products all over the world. They are made from bad quality solar cells without QC and CE,UL,TUV certification. But they paste a nameplate extremely similar to the genuine ones. Then they were sold in a much lower price. Many customers were cheated to pay. But after installation, a series of problems appear.

DJSC only sells genuine solar products with high quality. They are all from original factory.

One step to distinguish easily. Different types of Trina solar panel have different QR ID. So download wechat app or other app can scan QR. After scanning, it tells you the type code, power, grade, current bin. For the product my customer asked me has below scan result.

270PD05|Q1|I2

The second step is using below Trina customer service app to distinguish for sure.

So now you are a trina product expert. Scan one to have a test.
